

ESET NOD32 for MS Exchange Server

High Performance, Lightweight Security for Your Mail Servers

ESET NOD32 for MS Exchange Server

Since most viruses and malicious software come from email, protection should be applied at the distribution point – the mail server.

ESET NOD32 Antivirus for Microsoft Exchange brings lightweight and powerful protection for business-critical email servers. It offers multi-threaded background scanning for higher performance, and rule-based customized scanning for greater efficiency.

Every email is scanned before it reaches the end user. Stored mail can be automatically rescanned with each signature update.

ESET NOD32 Antivirus for Microsoft Exchange automatically detects threats and stops outbreaks, preventing disruptions to your business.

NEW FEATURES

Full Microsoft Exchange 2007 support

Supports the following systems:
32-bit version for MS Exchange 5.5 SP3, 2000 SP1 & 2003
64-bit version for MS Exchange 2007

Improved architecture

Virus scanner runs inside the NOD32 Control Center as a separate process, independent of the MS Exchange Server process (Optional on 32-bit version).

More granular scanning scoping

Background scan can be configured to run on all messages or only on messages received in a certain time period – last week, month, three months, six months or year. Additionally the product may be configured to scan only plain text, RTF, or messages with attachments.

Background scan scheduling

Background scans can be scheduled to run only in a specified time frame, for example during non-business hours when server load is lower.

Mailbox-specific rules

Rules can now be executed based on mailbox name

Performance monitoring

Log file now includes performance information, which can be used by administrators to optimize configuration settings

KEY BENEFITS

Malware-free email

Complete email protection means businesses run smoothly. Scan all email entering the network for threats that can cause business disruptions and financial damages

Light and flexible

Flexible configuration minimizes impact on resources – scan email on access or in storage on the Exchange server. Control how and when to scan a specified range of email messages, as well as duration for run each scan

System Requirements

Operating Systems:	Microsoft® Windows® NT 4.0 Server
	Microsoft Windows 2000 Server
	Microsoft Windows Server 2003
	Microsoft Windows Server 2008
Mail Server:	Microsoft Exchange Server 5.5 SP3 and higher
	Microsoft Exchange Server 2000 SP1 and higher
	Microsoft Exchange Server 2003
	Microsoft Exchange Server 2007
Hardware:	30MB free hard disk space
	32MB RAM in addition to minimum operating system and MS Exchange Server requirements
